

# Agentic AI

From Script → Thinking Agent

# The Hook

## Why can't ChatGPT plan your trip perfectly?

Generative AI excels at conversation but struggles with logistical precision and execution.

👉 “It gives words... not decisions”

# 👉 “LLM Alone is NOT Enough”

## ✗ No calculation

LLMs are probability engines, not math experts.

## ✗ No validation

Hallucinations pass through without checks.

## ✗ No reliability

Unpredictable outputs for complex tasks.

# Session 1: Controlled AI

👉 “YOU control everything”

# Scripted Execution

**travel\_info**

**calculator**

**final answer**

👉 “AI is just executing”

# Limitations

✗ Not flexible

✗ Hardcoded

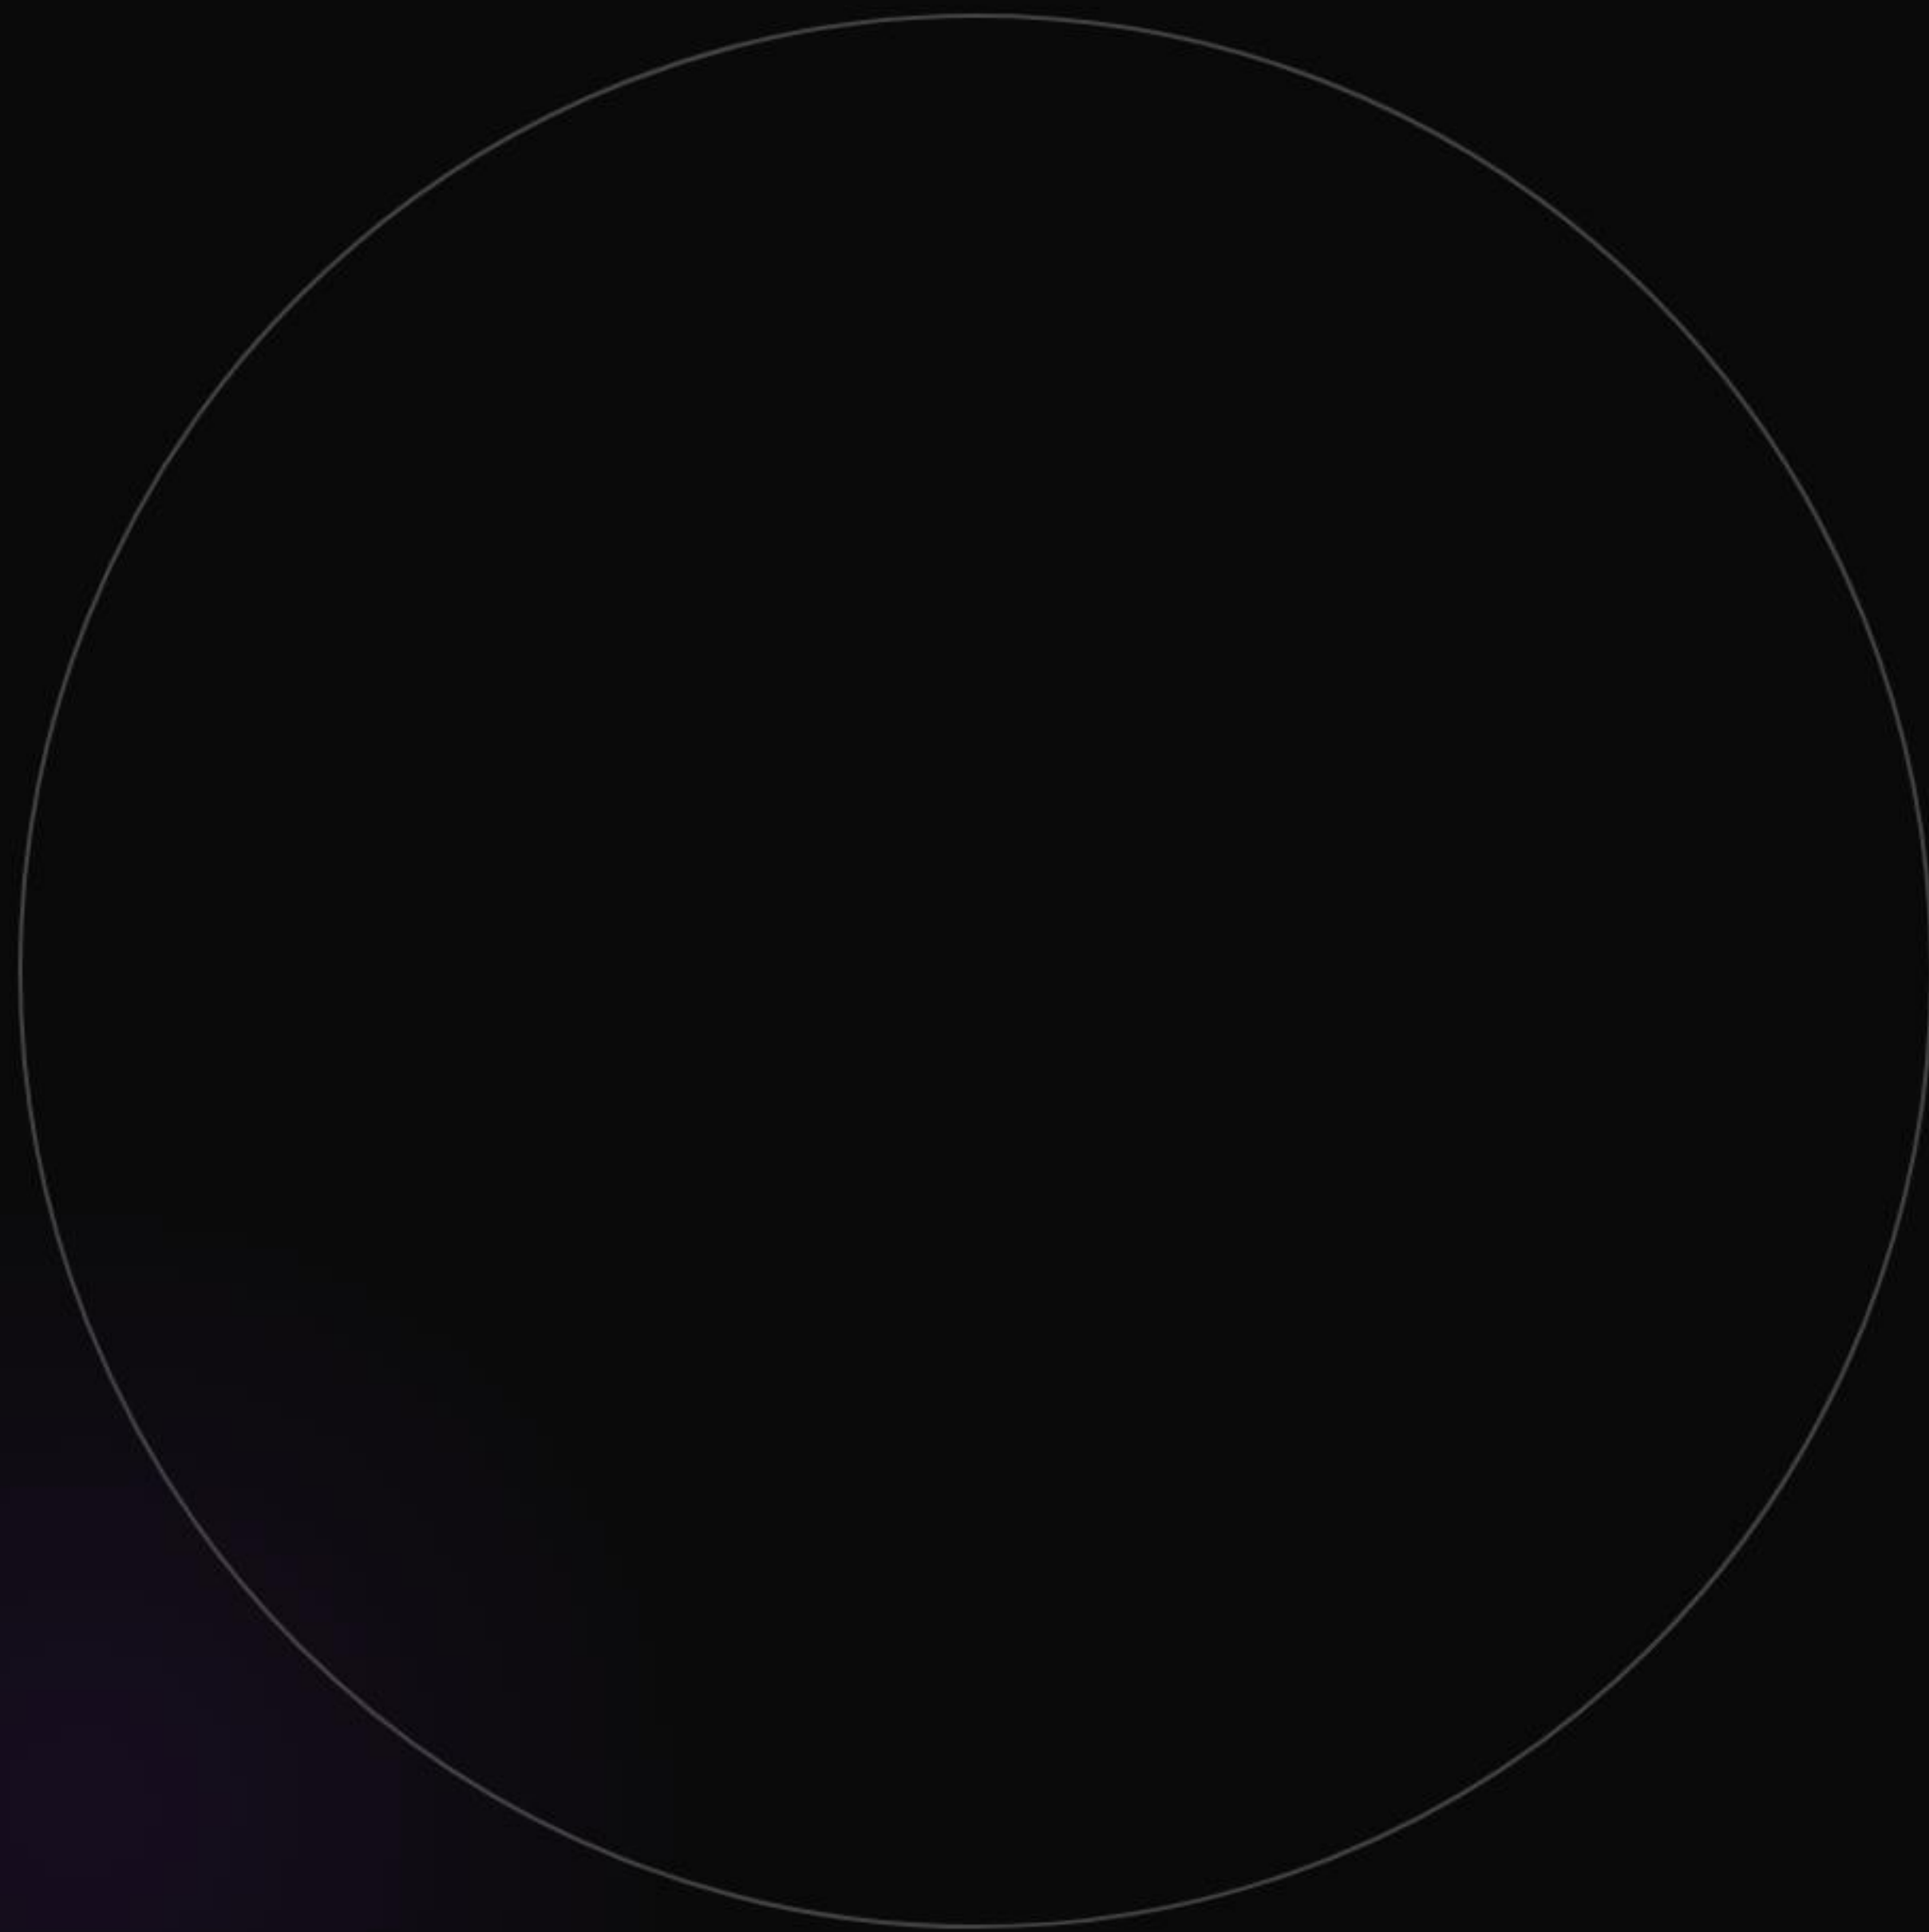

✗ Not intelligent

✗ No decision-making

“This is NOT real AI”

# Session 2: Thinking AI

## Architectural Shift

User → AI (Brain) → Tools → AI → Output

👉 “AI starts deciding steps”

# The ReAct Loop

👉 “This is how AI Agents think”

# Live Demo

Input :

👉 **Plan a 3-day Goa trip under ₹15000**

👉 “Watch how AI thinks step-by-step”

Input: Luxury trip under ₹5000

 **WRONG OUTPUT**

 “AI thinks... but not correctly”

# Critical Insight

 **Thinking**  
**≠**  
**Correct**

## AI agents still need:

-  **Control:** Setting strict guardrails.
-  **Validation:** Verification at every step.
-  **Structure:** Defining the environment.

# 👉 “What if AI works as a team?”

## Planner

Strategy & Tasks

## Budget

Financial Logic

## Reviewer

Quality Assurance

# Next session: Multi-Agent System
