

Agentic AI – Advanced Trainer Guide (Session 1: 3 Hours)

1. Session Objective

Goal: Move participants from 'script-based thinking' to 'AI agent thinking'.

Key Outcome: Participants understand how AI decides actions (ReAct loop).

2. Opening Hook (0:00 – 0:30)

Ask: Why can't ChatGPT plan perfectly?

Demo Input: Plan a 3-day Goa trip under ₹15000

Teaching Line: LLM alone is not enough. We need SYSTEM.

3. Controlled AI (0:30 – 1:30)

Explain step-by-step execution:

- travel_info()
- calculator()
- final response

Teaching Line: YOU control AI. It is not thinking.

4. Thinking AI (1:30 – 2:15)

Introduce ReAct loop:

Thought → Action → Observation

Ask: Did we tell AI what to do?

Answer: No → AI is deciding.

5. Break the System (2:15 – 2:45)

Demo Input: Plan a luxury Goa trip under ₹5000

Discuss failure:

- No constraint handling

- No validation

Teaching Line: AI thinks, but not correctly.

6. Transition to Session 2

Introduce multi-agent concept:

Planner → Budget → Reviewer

Teaching Line: Next, AI will collaborate like a team.

7. Trainer Tips

- 1 Pause after each step
- 2 Ask participants what they expect
- 3 Encourage predictions
- 4 Highlight failures clearly
- 5 Keep energy high
